

## UEFI & EDK II TRAINING

EDK II Open Board Platform Design for Intel Architecture (IA)

tianocore.org

## LESSON OBJECTIVE

- Introduce Minimum Platform Architecture (MPA)
- Explain the EDK II Open board platforms infrastructure & focus areas
- Describe Intel® FSP with the EDK II open board platforms

Reference: Minimum Platform Architecture Specification

#### DESIRED USE CASES

Open Source EDK II Platforms

Developers need a way to turn on and off of a feature.

Developers need a way to get platform configuration data.

Developers need to do porting work from an existing board to a new board.

Developers might need to work on a different board.

# INTRODUCING Minimum Platform Architecture

#### GOALS

#### Minimum Platform Architecture (MPA)

Structured

Enable developers to consistently navigate code, boot flow, and the functional results

Approachable

Enable developers to quickly produce a baseline that is extensible with minimal UEFI or EDK II knowledge

**Portable** 

Minimize coupling between common, silicon, platform, board, and feature packages

Reusable

Enable large granularity binary reuse (FV binaries)

Testable

Enable validating the correctness of a port

Design open source EDK II Intel Architecture firmware

## Code Convergence & Consistency

System firmware (BIOS) is the largest payload in the IFWI binary image

Platform implementation is ~2-3 million lines+ of "C" code

Technology complexity increasing, strains firmware implementation solutions

Limited firmware engineering resources

Copy + Paste + Modify = Human Errors

#### Why Move to Open Source?

#### Goal:

- Enable improvements in quality and security for Intel products
- Enable vertically integrated open solutions

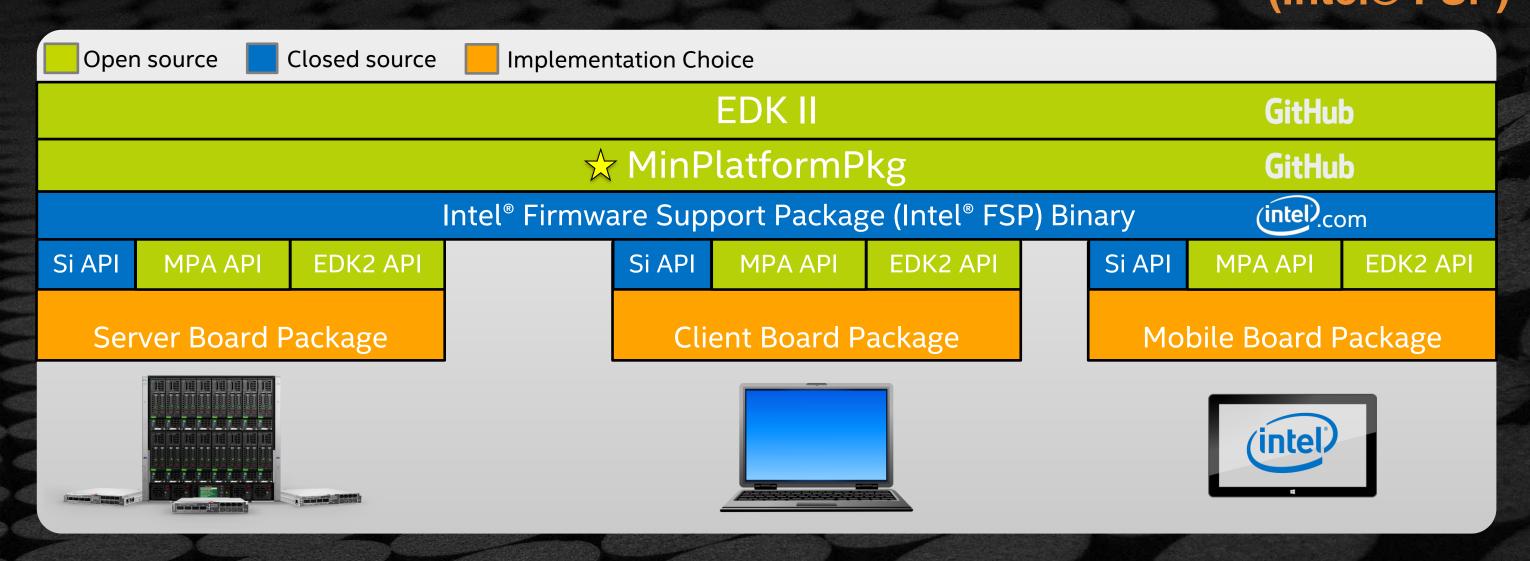

#### **Benefits:**

- Allow improved customer engagements
- Builds transparency and trust
- Reduce overhead to transition from internal to external
- Deploy fixes across the ecosystem more rapidly

Easier to access, understand, fix & optimize means improved product quality

## MinPlatform + Intel® Firmware Support Package (Intel® FSP)

Intel Open Platform Firmware Stack - Minimum Platform

Consistent boot flows and interfaces
Approachable across the ecosystem
Scalable from pre-silicon to derivatives

#### What are Minimum Platform Stages?

Minimal Debug

External Debugger Support

**Serial Port** 

Progress and Error reporting

Memory Functional

Basic HW Initialization

Memory Initialized

Boot to UEFI Shell

Includes Serial Console I/O

UEFI Shell command line interface

Stage Soot to Boot to

Basic ACPI Table Initialization

SMM support

OS kernel minimal functionality

Security Enabled

Authenticated Boot

Security Registers Locked Advanced B Feature Selection

Features Selected Based on System-Specific Usage.

**BIOS Setup** 

Capsule Update

Minimum Platform

Full Platform

Stages reflect firmware development lifecycle and how a system bootstraps itself

#### Four Focus Areas

Feature

Tree Structure

Configuration

- Staged
- Defined PCD
- Policy Hob/PPI/Protocol

Staged Minimal Baseline

Feature ON/OFF

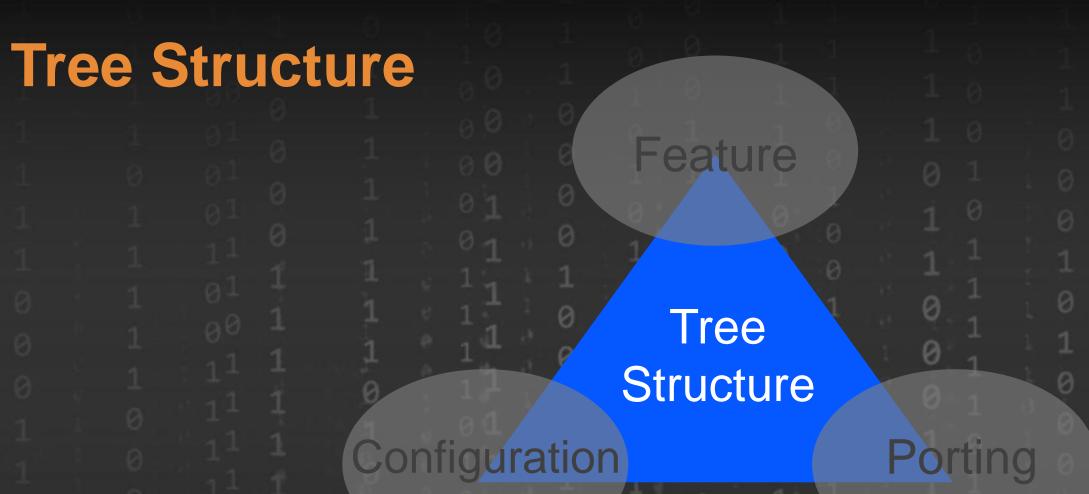

- Debug
- I/O Devices
- User Interface

•

**Porting** 

- Staged
- GPIO
- SIO
- ACPI

### Organization

Common

No direct HW requirements

Platform

Enable a specific platform's capabilities.

Board

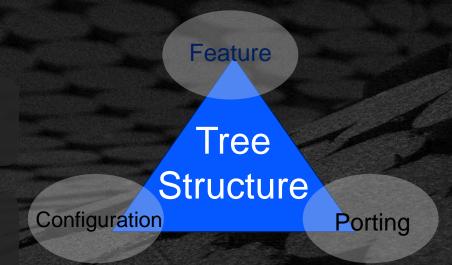

Board specific code

Silicon

Hardware specific code

**Features** 

 Advanced features of platform functionality that is non-essential for "basic OS boot"

#### Package Organization Example

MinPlatformPkg

• Common - Boot flow, well defined interfaces

Tree
Structure
Configuration
Porting

**Feature** 

BoardModulePkg

Board - Generic board functionality (e.g. CMOS access code) – staging to EDK II

XxxOpenBoardPkg

 Platform Xxx\* - board-specific details: GPIOs, memory config, audio verb tables, etc.

XxxSiliconPkg

• Silicon - Hardware specific code for Xxx

YyyFeaturePkg

• Features – Advanced functional features

\*Where Xxx would be an open platform: KabyLakeOpenBoardPkg, WhiskeyLakeOpenBoardPkg, etc.

#### MPA Dependency Rules

EDK II (Green "H" MdePkg)

Other Edk2 Packages

Yyy FeaturePkg

XxxSiliconPkg

MinPlatformPkg

BoardModulePkg

XxxOpenBoardPkg

#### Key

Bottom shapes can only depend on shapes above them

YyyFeaturePkg — represents multiple feature package instances that are mutually exclusive to each other

BoardAbc

BoardAbc – directory for OpenBoardPkg.dsc

#### **Directory Description**

edk2-platform: EDK II repo includes open source platform code

- Platform folder: contains the platform specific modules by architecture
  - BoardModulePkg: generic board functionality (board Lib interfaces)
  - MinPlatformPkg: generic platform instance to control the boot flow.
  - XxxFeaturePkg: package to hold Xxx advanced platform feature.
  - <Generation>OpenBoardPkg: the silicon generation specific board package. All of the boards based upon this silicon generation can be located here.
- Silicon folder: contains the silicon specific modules.
- <Generation>SiliconPkg: the silicon generation specific silicon package.
   edk2-non-osi: EDK II repo for platform modules in binary format (ex: silicon init binaries).
- <Generation>SiliconBinPkg: It is the silicon generation specific binary package. For example, CPU Microcode or the silicon binary FVs.

Ideally, Only <Generation>OpenBoardPkg needs updating

#### **FSP Directory Description**

FSP: repo for Intel® Firmware Support Package (FSP) binaries Platform folder Pkg: Each FSP project will be hosted in a separate directory

- ApolloLakeFspBinPkg Intel® Atom™ processor E3900 product family
- •
- CoffeeLakeFspBinPkg 8th Generation Intel® Core™ processors and chipsets (formerly Coffee Lake and Whiskey Lake)
- KabylakeFspBinPkg 7<sup>th</sup> Generation Intel® Core™ processors and chipsets
  - Include
    - FSP UPD structure and related definitions used with EDK II build
- Doc Integration Guide .PDF documentation
- FSP.fd Binary to be included with flash device image
- FSP.bsf Configuration File with IDE configuration tool

FSP each project based on Intel Architecture

## Board Package Structure MinPlatformPkg

```
MinPlatformPkg /
     <Basic Common Driver>/
     Include /
     Library /
     PlatformInit /
```

Platform Common Driver

#### Where:

- <Basic Common Driver>: The basic features to support OS boot, such as ACPI, flash, and FspWrapper. It also includes the basic security features such as Hardware Security Test Interface (HSTI).
- Include: The include file as the package interface. All interfaces defined in MinPlatformPkg.dec are put to here.
- Library: It only contains feature independent library, such as PeiLib. If a library is related to a
  feature, this library is put to <Feature>/Library folder, instead of root Library folder.
- PlatformInit: The common platform initialization module. There is PreMemPEI, PostMemPEI,
  DXE and SMM version. These modules control boot flow and provide some hook point to let
  board code do initialization.

## Board Module Package Structure BoardModulePkg

```
BoardModulePkg /
   Include /
   Library /
    BiosIdLib /
   CmosAccessib /
   PlatformCmosAccessLibNull /
```

Board Generic Functionality

#### Where:

- Include: The include file as the package interface. All interfaces defined in BoardModulePkg.dec are put to here.
- Library: It only contains board generic features as independent library, such as BiosIdLib and Cmos Access Lib

## Open Board Package Structure <a href="mailto:square">Generation</a>>OpenBoardPkg

```
<Generation>OpenBoardPkg /
    <BasicCommonBoardDrivers>/
    Include /
    Library /
    Features /
        <AdvancedCommonBoardDrivers> /
        <BoardX> /
            Include/
            Library/
            <BoardSpecificDriver> /
            OpenBoardPkg.dsc
            OpenBoardPkg.fdf
```

#### Where:

- <a href="#">BasicCommonBoardDrivers</a> and <a href="#">AdvancedCommonBoardDrivers</a> designate a board generation specific feature. They need to be updated when we enable a board generation.
- <Board> contains all the board specific settings. If we need to port a new board in this generation, copy the <Board> folder and update the copy's settings

#### **Advanced Feature Package**

```
XxxFeaturePkg /
    Include /
    Library /
    Readme.md
```

The advanced features, domains such as SMBIOS table, IPMI, User Interface, Power Management

#### Where:

Include: The include file as the package interface.

Library: Implementation of feature as a library.

Readme.md: Describes the purpose and scope of the feature package with a list of dependencies

#### One Feature, One directory Guideline

Use a hierarchical layout, KabylakeOpenBoardPkg example

```
KabylakeOpenBoardPkg /
 Acpi /
                                            KabylakeRvp3 / (cont.)
    BoardAcpiDxe
                                              Include /
  FspWrapper /
                                              Library /
    Library /
                                              OpenBoardPkg.dsc
    PeiFspPolicyUpdateLib /
                                              OpenBoardPkg.fdf
  Include /
  KabylakeRvp3
  Library /
    BaseEcLib /
    BaseGpioExpanderLib /
    PeiI2cAccessLib /
  Policy /
```

Only put the basic features into the root directory

#### **Features**

**Staged Minimal Baseline** Feature ON/OFF Debug **Feature** I/O Devices User Interface Tree Structure Configuration Porting

#### **Feature Selection**

There are three phases of feature selection

Minimum

Manage Stage I-V options

Advanced Feature Selection

Add rich feature sets (Stage VI)

Optimization

Remove undesired features (Stage VII)

Tree Structure Configuration Porting

Select features through build, prune in binary

#### Minimum Platform Feature Selection

#### Minimum Platform

- Minimum feature selection should be exclusively implemented as Platform Configuration Database (PCD)
- Required PCD are identified in the MPA specification
- PCDs:
  - Declared with defaults in DEC files in different packages
  - Modified in DSC file for the board, if different than the default value

Silicon – FSP Integration from <Generation>FspBinPkg documentation package

All initial porting features selection should be done this way

Tree
Structure
Porting

#### **Advanced Feature Selection**

Advanced features implement DSC and FDF files that you can include in your board DSC and FDF files in the correct spots

OpenBoardPkg.dsc File

• • •

<End-of-File>

!include YyyAdvancedPkg.dsc

OpenBoardPkg.fdf File

FV Advanced Pre-Mem

!include YyyAdvancedPkgPreMem.fdf

FV Advanced Post-Mem

!include YyyAdvancedPkgPostMem.fdf

**FV Advanced Late** 

!include YyyAdvancedPkgLate.fdf

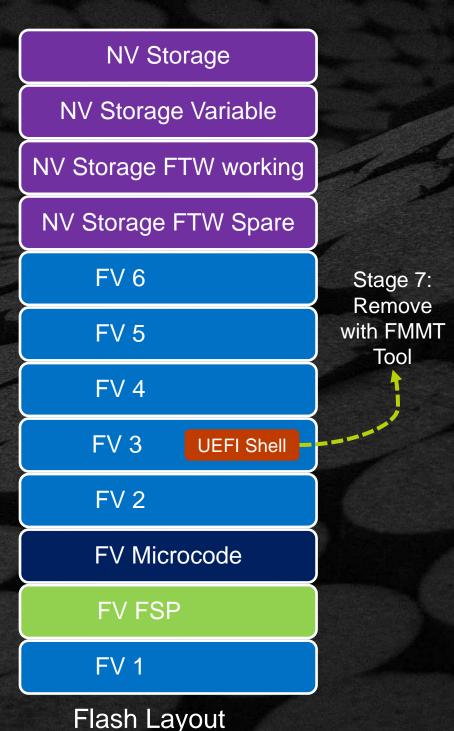

## **Optimization Feature Selection**

Minimum Platform takes advantage of UEFI and EDK II features to enable feature selection to be done by post-processing the built binaries

Essentially, after your system is functioning well, you can remove features using the FMMT tool to remove the drivers that are included as you build up the desired functionality

For example, if you need UEFI Shell during power-on, testing, etc. But you don't want it for final product. Minimum Platform architecture makes it easy to locate and remove the shell by post-processing the image

Link for FMMT Tool

#### **Full Customization Feature Selection**

Feature modifications only at the Board / Platform DSC Preferred modifications at Board (e.g. BoardAbc)

Tree
Structure
Configuration Porting

#### XxxOpenBoardPkg

BoardAbc

BoardAbc – directory for OpenBoardPkg.dsc

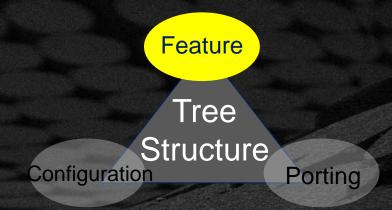

#### **Features Build Enabled**

#### Platform-Board Build Scripts

Many platforms have a script (Python or bash) to pre & post process the EDK II build process: Build Script

#### Configuration Files:

- edk2-platforms/Platform/Intel/build.cfg default settings
- Default settings are under the DEFAULT\_CONFIG section
- Override the edk2-platforms/Platform/Intel/. . ./build.cfg settings from each board in board specific directory

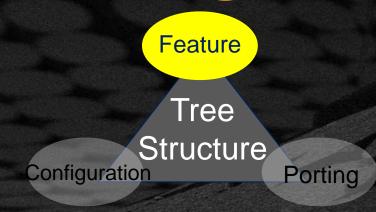

#### **Example Build Config File**

#### Kabylake example of Board specific settings:

<workspace>/edk2-platforms/Platform/Intel/KabylakeOpenBoardPkg/\
KabylakeRvp3/ build\_config.cfg

```
[CONFIG]
WORKSPACE_PLATFORM_BIN = WORKSPACE_PLATFORM_BIN
EDK SETUP OPTION =
openssl path =
PLATFORM BOARD PACKAGE = KabylakeOpenBoardPkg
PROJECT = KabylakeOpenBoardPkg/KabylakeRvp3
BOARD = KabylakeRvp3
FLASH_MAP_FDF = KabylakeOpenBoardPkg/Include/Fdf/FlashMapInclude.fdf
PROJECT DSC = KabylakeOpenBoardPkg/KabylakeRvp3/OpenBoardPkg.dsc
BOARD PKG PCD DSC =
KabylakeOpenBoardPkg/KabylakeRvp3/OpenBoardPkgPcd.dsc
ADDITIONAL SCRIPTS =
KabylakeOpenBoardPkg/KabylakeRvp3/build_board.py
PrepRELEASE = DEBUG
SILENT MODE = FALSE
```

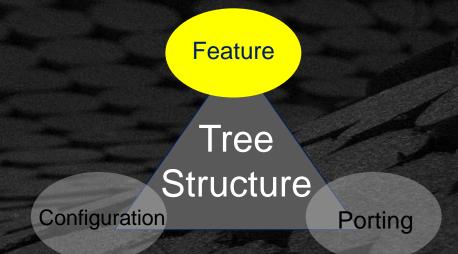

Platform name & path to build.cfg file under [PLATFORMS]

## Minimum Platform Stage Selection

Platform Firmware Boot Stage PCD:

OpenBoardPkgConfig.dsc

```
[PcdsFixedAtBuild]
#
# Please select BootStage here.
# Stage 1 - enable debug (system deadloop after debug init)
# Stage 2 - mem init (system deadloop after mem init)
# Stage 3 - boot to UEFI shell only
# Stage 4 - boot to OS
# Stage 5 - boot to OS with security boot enabled
# Stage 6 - Add Advanced features
gMinPlatformPkgTokenSpaceGuid.PcdBootStage 4
```

### Minimum Platform Stage Selection

Stage selection allows developers to bring up a system in a familiar matter:

- Set to Stage I. Boot, verify serial debug capability, ready for silicon debug
- Set to Stage II. Boot, verify memory and silicon functionality
- Set to Stage III. Boot, verify board porting from shell: devices, GPIO, etc.
- Set to Stage IV. Boot, verify ACPI porting, MADT, DSDT methods, etc.

Developers can exercise functionality gradually.

Verification at each stage

# **Configuration Options**

There might be many sources of platform configuration data.

PI PCD

Configuration Block

**CMOS** 

**UEFI** Variable

Global NVS

**MACRO** 

FSP UPD-Silicon Policy Hob/PPI/ Protocol

Platform signed data blob

# **MPA Configuration Options**

### Platform configuration data for Minimum Platform

PI PCD

 The PI PCD could be static data fixed at build time or dynamic data updatable at runtime.

FSP UPD- Silicon Policy Hob/PPI/ Protocol  FSP UPD can be static default configuration, or a dynamic updatable UPD. It is policy data constructed at runtime or it can be a hook for silicon code

**Global NVS** 

 ACPI region, passes configuration from C code to ASL code.

### TIP: Use PCD Instead of UEFI Variable

#### **UEFI** Variable

```
//
// Get config from setup variable
//
VarDataSize = sizeof (SETUP_DATA);
Status = GetVariable (
    L"Setup",
    &gSetupVariableGuid,
    NULL,
    &VarDataSize,
    &mSystemConfiguration
);
```

### **PCD**

```
//
// Get setup configuration from PCD
//
CopyMem (
    &mSystemConfiguration,
    PcdGetPtr (PcdSetupConfiguration),
    sizeof(mSystemConfiguration)
);
```

### **PCD Syntax Review**

### PCD defined in the DEC file from any package

```
[Guids.common]
```

```
PcdTokenSpaceGuidName={0x914AEBE7, 0x4635, 0x459b, { 0xAA, . . .}}
```

[Pcds...]

PcdTokenSpaceGuidName.PcdTokenName | Value[ | DatumType[ | MaxSize]] | Token

### PCD usage listed in INF file for module

[...Pcd...]

PcdTokenSpaceGuidName.PcdTokenName | [Value]

### Value of PCD set in OpenBoardPkg...dsc

[Pcds...]

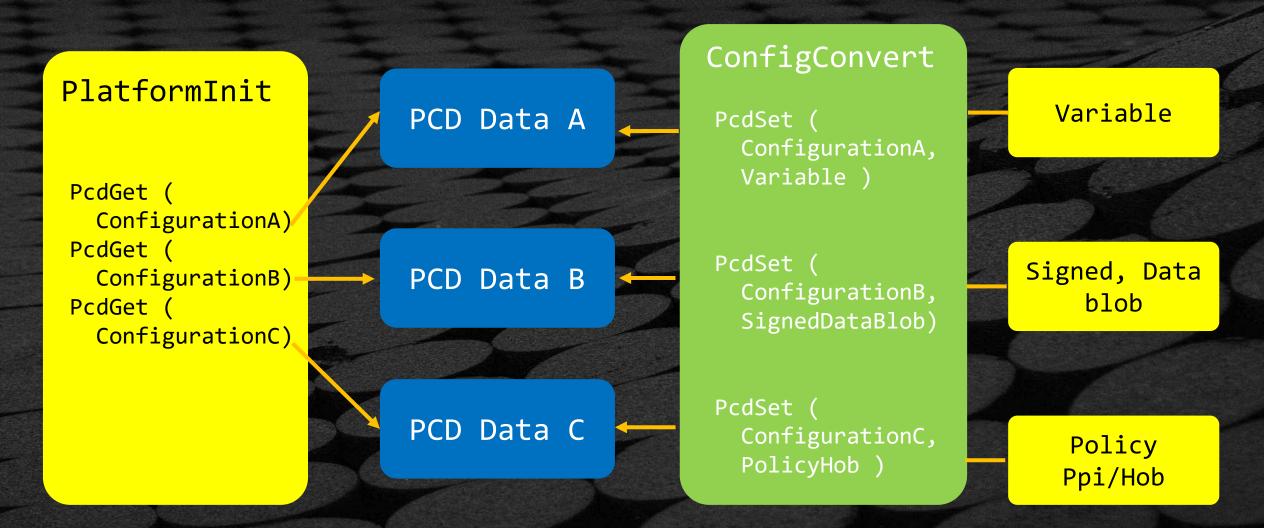

PcdTokenSpaceGuidName.PcdTokenName|Value[|DatumType[|MaximumDatumSize]]

# How to Map PCD to Configuration Data

Using "Callback" mechanism to convert PCD to Configuration data

Platform driver should use PcdGet() to retrieve policy data, and PcdSet() to update policy data.

Source Open Source IA Firmware Platform Design Guide in EFI Developer Kit II.pdf Fig 7.

### "C" Data Structure as PCDs

### Example: AdvancedFeaturePkg.dec for SMBIOS type 0 data structure

```
gAdvancedFeaturePkgTokenSpaceGuid.PcdSmbiosType0BiosInformation \
        {0x0} | SMBIOS TABLE TYPE0 | 0x80010000 {
    <HeaderFiles>
       IndustryStandard/SmBios.h
    <Packages>
       MdePkg/MdePkg.dec
       AdvancedFeaturePkg/AdvancedFeaturePkg.dec
gAdvancedFeaturePkgTokenSpaceGuid.PcdSmbiosType0BiosInformation.Vendor | 0x1
gAdvancedFeaturePkgTokenSpaceGuid.PcdSmbiosType0BiosInformation.BiosVersion | 0x2
gAdvancedFeaturePkgTokenSpaceGuid.PcdSmbiosType0BiosInformation.BiosSegment | 0xF000
gAdvancedFeaturePkgTokenSpaceGuid.PcdSmbiosType0BiosInformation.BiosReleaseDate 0x3
gAdvancedFeaturePkgTokenSpaceGuid.PcdSmbiosType0BiosInformation.BiosSize | 0xFF
gAdvancedFeaturePkgTokenSpaceGuid.PcdSmbiosType0BiosInformation.BiosCharacteristics.\
     PciIsSupported 1
gAdvancedFeaturePkgTokenSpaceGuid.PcdSmbiosType0BiosInformation.BiosCharacteristics.\
     PlugAndPlayIsSupported 1
```

# Example of DSC xRef (.DEC & .h)

### Purley Pkg DEC File

```
## gEfiSetupVariableGuid
```

#### "C" SetupVariable.h File

```
UINT8 FanPwmOffset;
UINT8 WakeOnLanSupport;
UINT8 Use1GPageTable;
UINT8 CloudProfile;
SYSTEM CONFIGURATION;
```

### StructureConfig.DSC File

```

CloudProfile | 0x0

gOemSkuTokenSpaceGuid.PcdSetupData.\
Use1GPageTable | 0x1

gOemSkuTokenSpaceGuid.PcdSetupData.\
FanPwmOffset | 0x0

gOemSkuTokenSpaceGuid.PcdSetupData.\
WakeOnLanSupport | 0x0
```

### Configuration Multi-SKU PCD – Board ID

### DSC File – SKU Set at BUILD time

```
SKUID_IDENTIFIER = ?
[SkuIds]
0 DEFAULT
4 BoardX
0x42 BoardY
[PcdsDynamicDefault.common.BoardX]
gBoardModuleTokenSpaceGuid.PcdGpioPin | 0x8
gBoardModuleTokenSpaceGuid.PcdGpioInitValue \
        \{0x00, 0x04, 0x02, 0x04, \ldots\}
[PcdsDynamicDefault.common.BoardY]
gBoardModuleTokenSpaceGuid.PcdGpioPin | 0x4
gBoardModuleTokenSpaceGuid.PcdGpioInitValue \
        \{0x00, 0x02, 0x01, 0x02, \ldots\}
```

### SKU PCD Set Dynamically

### Default Stores PCD – for Configuration

#### DSC File -

```
VPD_TOOL_GUID = 8C3D856A-9...

[DefaultStores]
0|STANDARD
1|MANUFACTURING
2|SAFE
```

- Special PCD to support the default stores concept in UEFI specification
- Can be Dynamically set

```
[PcdsDynamicExVpd.common.DEFAULT]
  gEfiMdeModulePkgTokenSpaceGuid.PcdNvStoreDefaultValueBuffer|*
[PcdsDynamicEx.common.DEFAULT.STANDARD]
  gOemSkuTokenSpaceGuid.PcdSetupData.CloudProfile|0x0
  gOemSkuTokenSpaceGuid.PcdSetupData.Use1GPageTable|0x1
[PcdsDynamicEx.common.DEFAULT.MANUFACTURING]
  gOemSkuTokenSpaceGuid.PcdSetupData.CloudProfile|0x1
  gOemSkuTokenSpaceGuid.PcdSetupData.Use1GPageTable|0x0
```

### Silicon Policy Data Flow Guidelines

Silicon Module Provides Default Silicon Policy Data

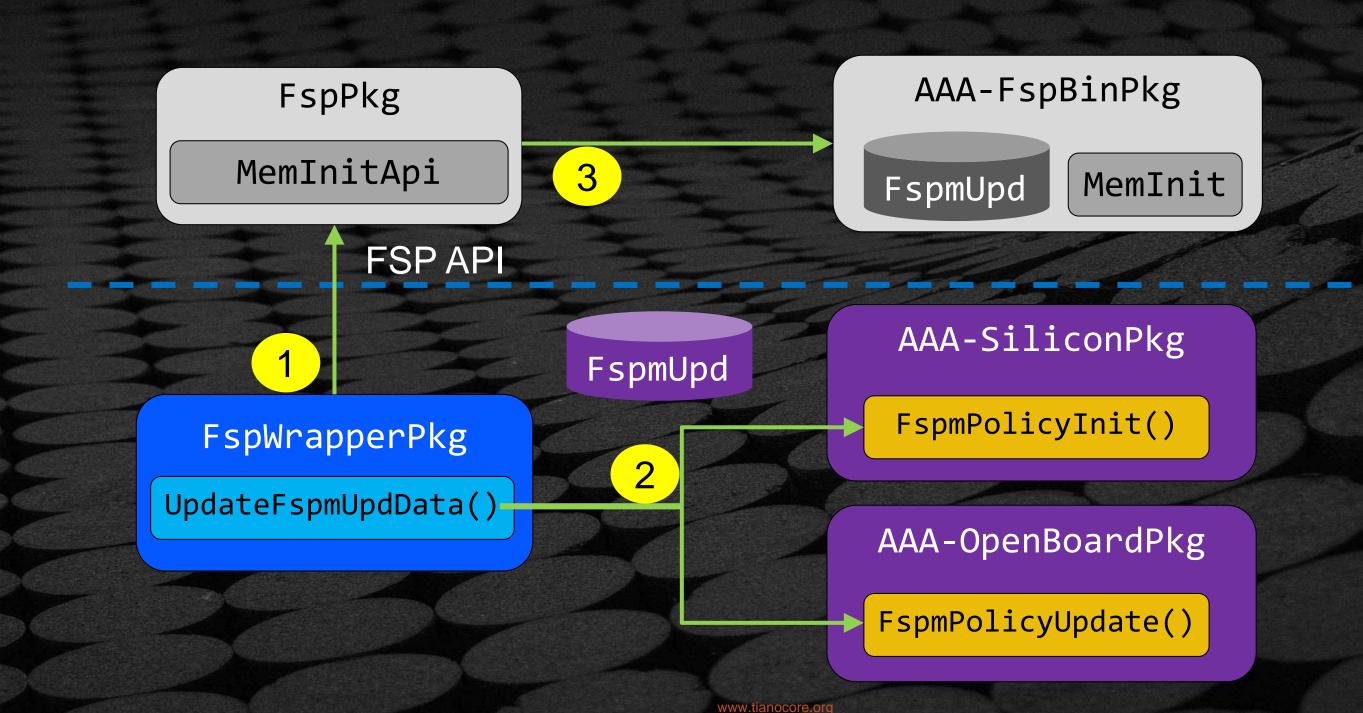

Typedef data structure

Board Module Updates the Silicon Policy Data

 PCD database, Setup Variable, Binary Blob, etc.

# **Example: FSP policy in MinPlatformPkg**

### Update Silicon Policy example

KabylakeOpenBoardPkg/FspWrapper/Library/PeiSiliconPolicyUpdateLibFsp

```
EFI STATUS
EFIAPI
PeiFspSaPolicyUpdatePreMem (
IN OUT FSPM_UPD *FspmUpd
VOID *Buffer;
// Override MemorySpdPtr
CopyMem((VOID *)(UINTN)\
 FspmUpd->FspmConfig.MemorySpdPtr00,\
 (VOID *)(UINTN)PcdGet32 (PcdMrcSpdData), \
 PcdGet16 (PcdMrcSpdDataSize));
CopyMem((VOID *)(UINTN)\
 FspmUpd->FspmConfig.MemorySpdPtr10,\
 (VOID *)(UINTN)PcdGet32 (PcdMrcSpdData),\
PcdGet16 (PcdMrcSpdDataSize));
```

```
// Updating Dq Pins Interleaved, Rcomp Resistor &
// Rcomp Target Settings
 Buffer = (VOID *) (UINTN) PcdGet32 \
           (PcdMrcRcompTarget);
  if (Buffer) {
    CopyMem ((VOID *)\
      FspmUpd->FspmConfig.RcompTarget, \
      Buffer, 10);
  return EFI SUCCESS;
```

Link to file: <a href="PeiSaPolicyUpdatePrMem.c">PeiSaPolicyUpdatePrMem.c</a>

# **Dynamically Set Defaults**

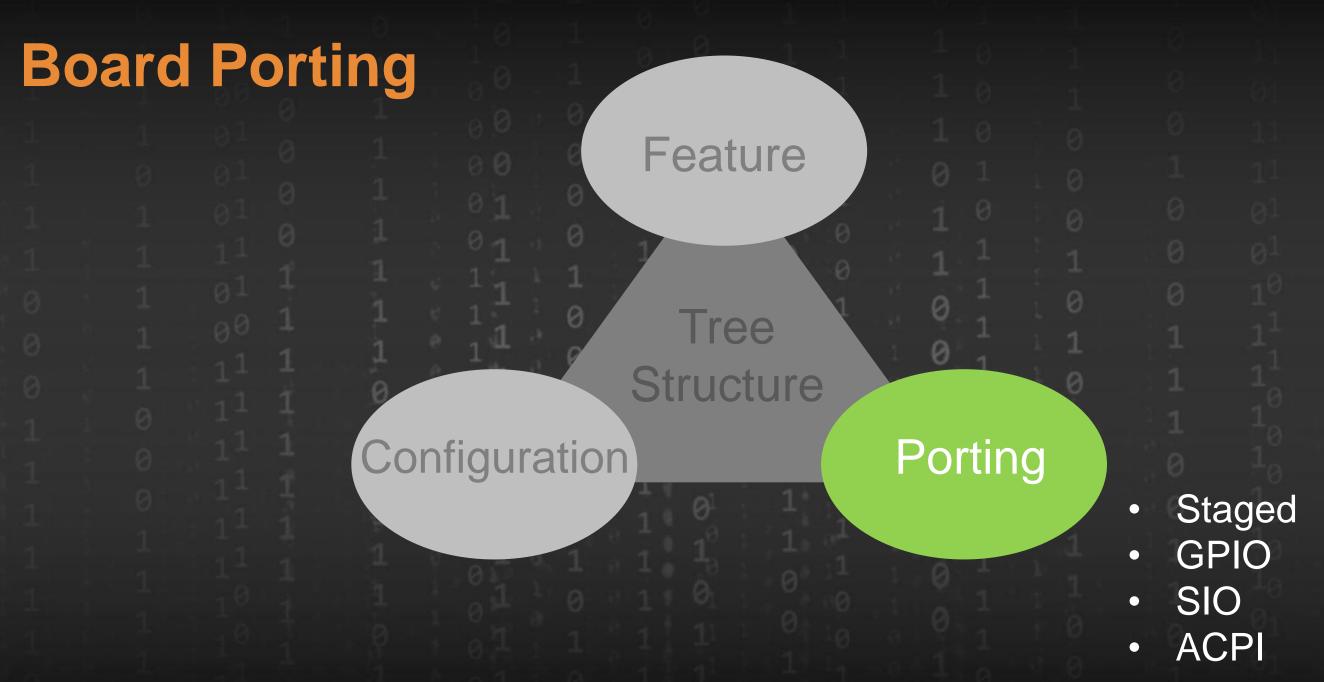

The Default Store PCD is also a dynamic PCD.

During boot, the board initialization code checks the boot mode and selects the default store.

This step must be after SetSku. Otherwise, the default setting may be wrong.

```
if (NeedDefaultConfig()) {
PcdSet16S (PcdSetNvStoreDefaultId, 0x0);
}
```

# Staged Approach by Features

- Platform Firmware Boot Stage PCD

### PCD Variable:

gPlatformModuleTokenSpaceGuid.PcdBootStage

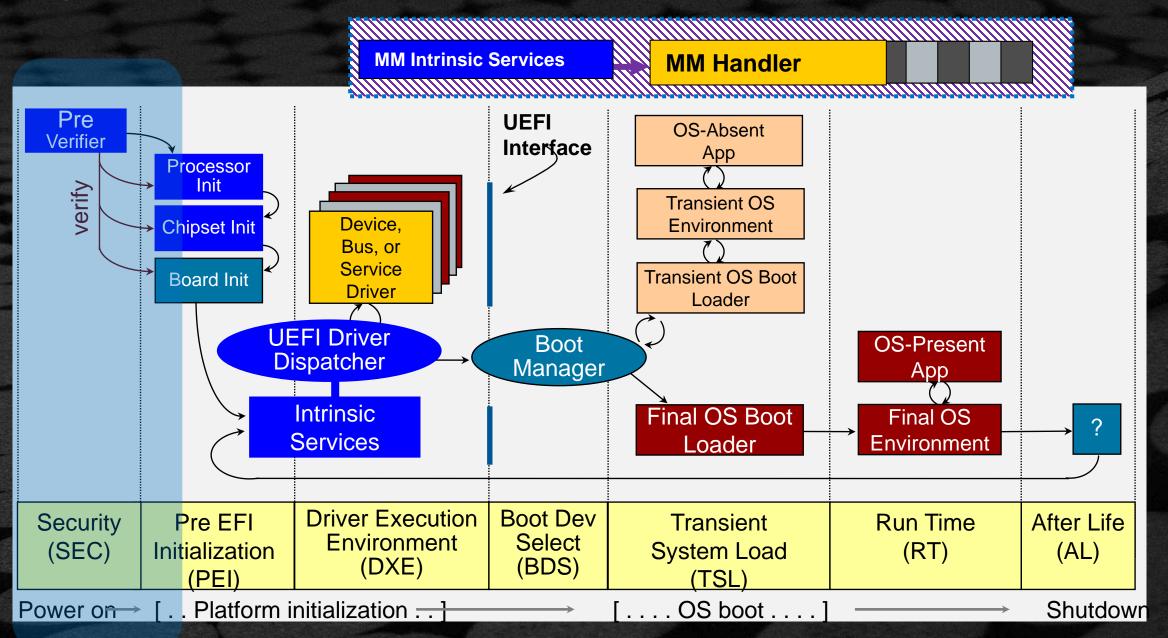

Stage 1	enable debug
Stage 2	memory initialization
Stage 3	boot to UEFI shell only
Stage 4	boot to OS
Stage 5	boot to OS w/ security enabled
Stage 6	Advanced Feature Selection
Stage 7	Performance Optimizations

PCD Is tested within .FDF to see which modules to include

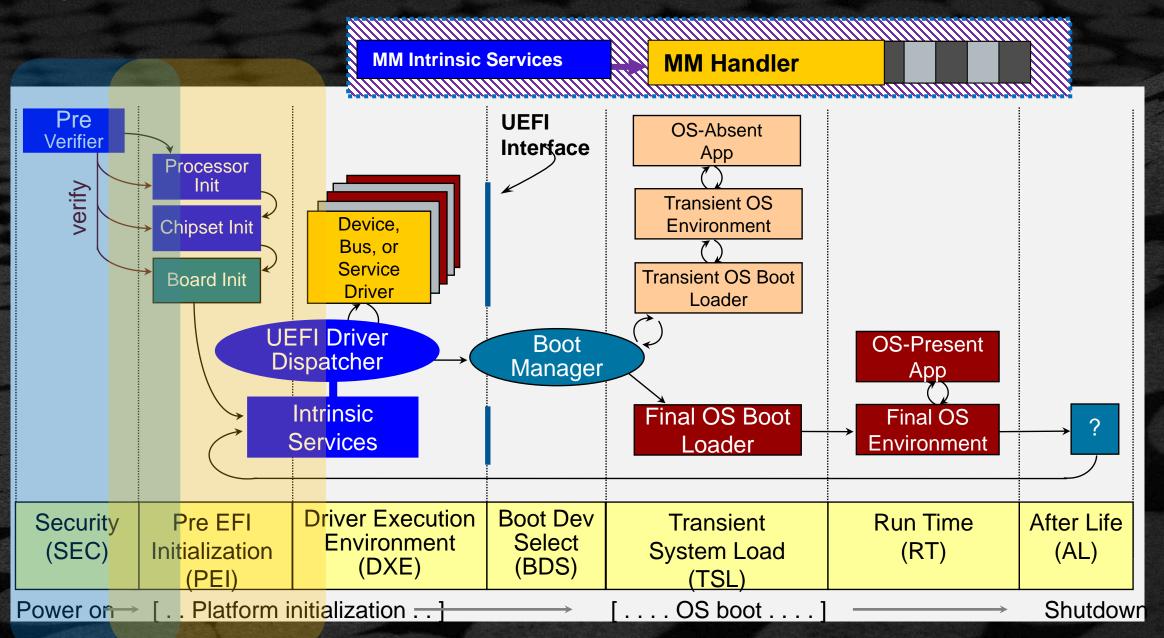

#### Stage 1

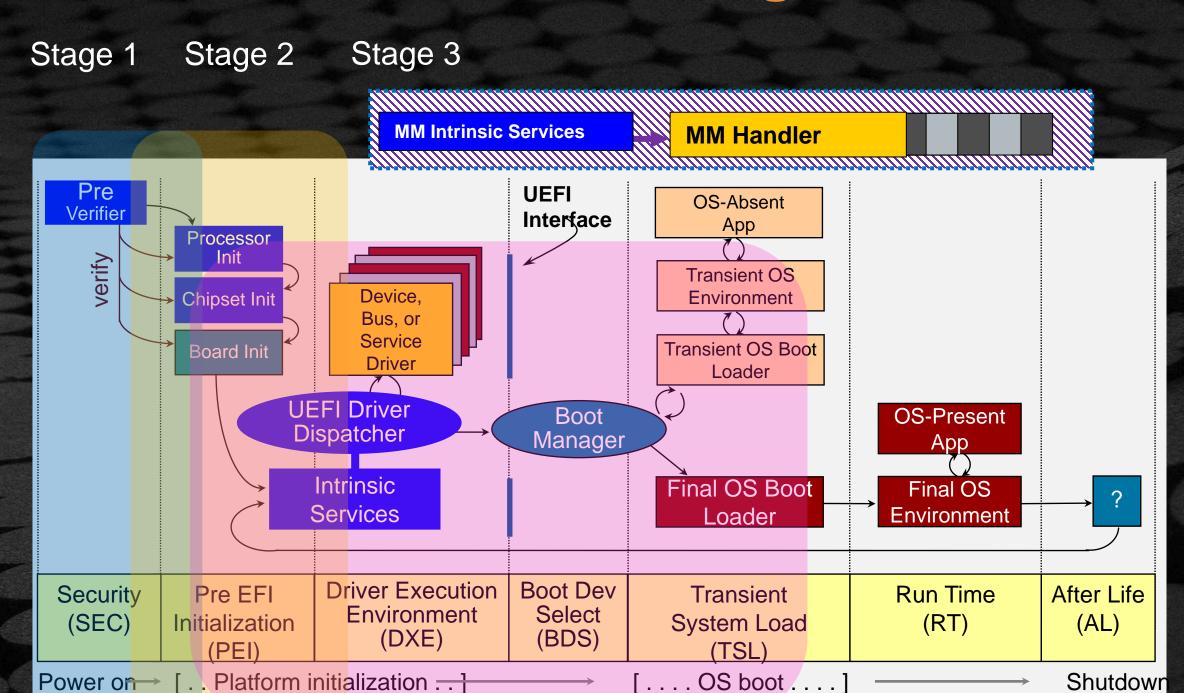

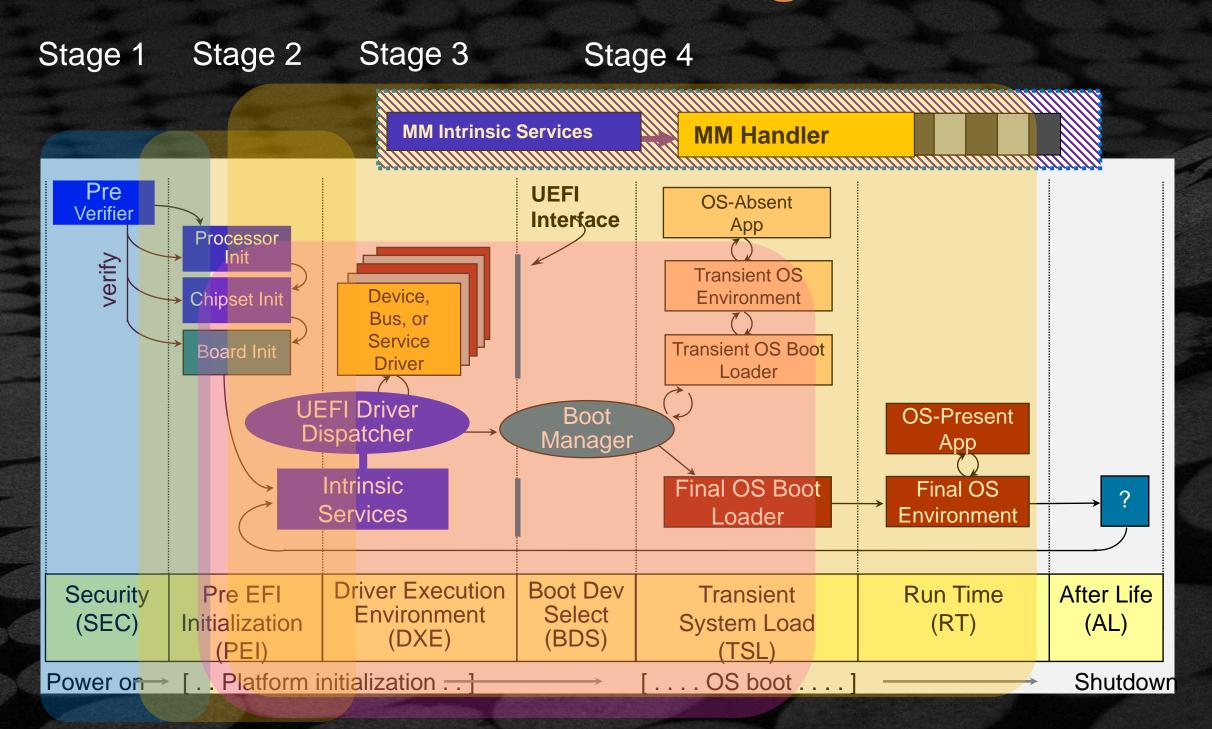

Stage 1 Stage 2

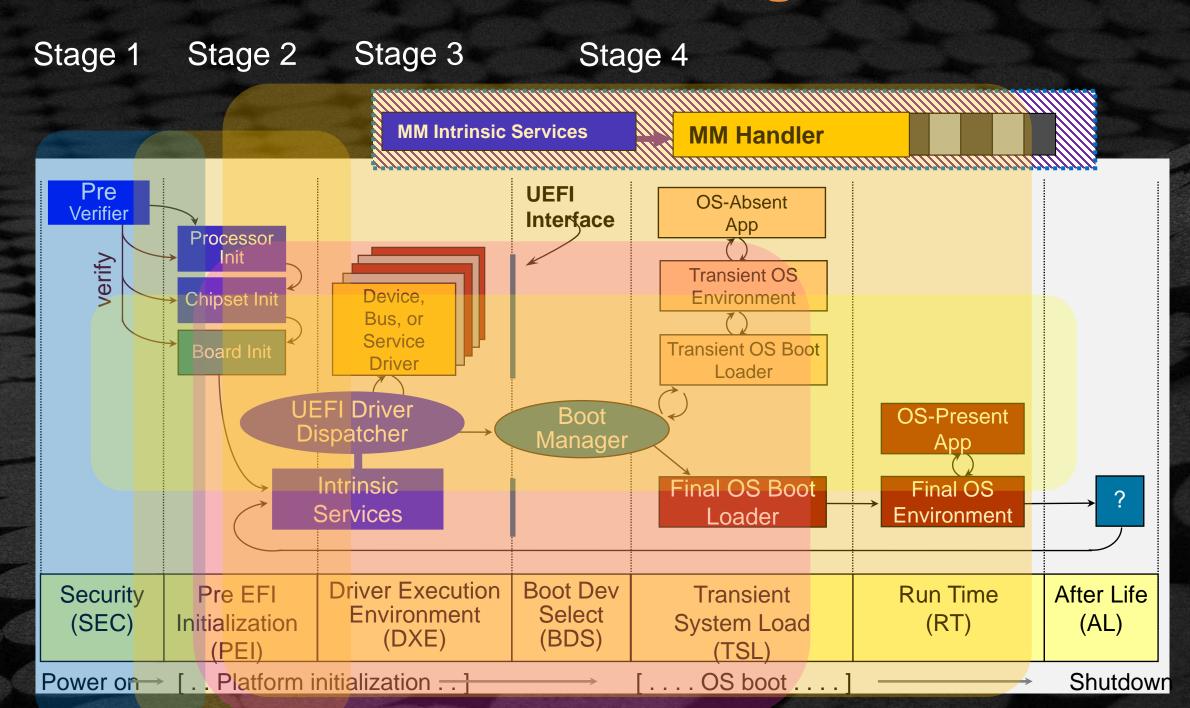

Stage 5

### Stages vs. Boot Flow

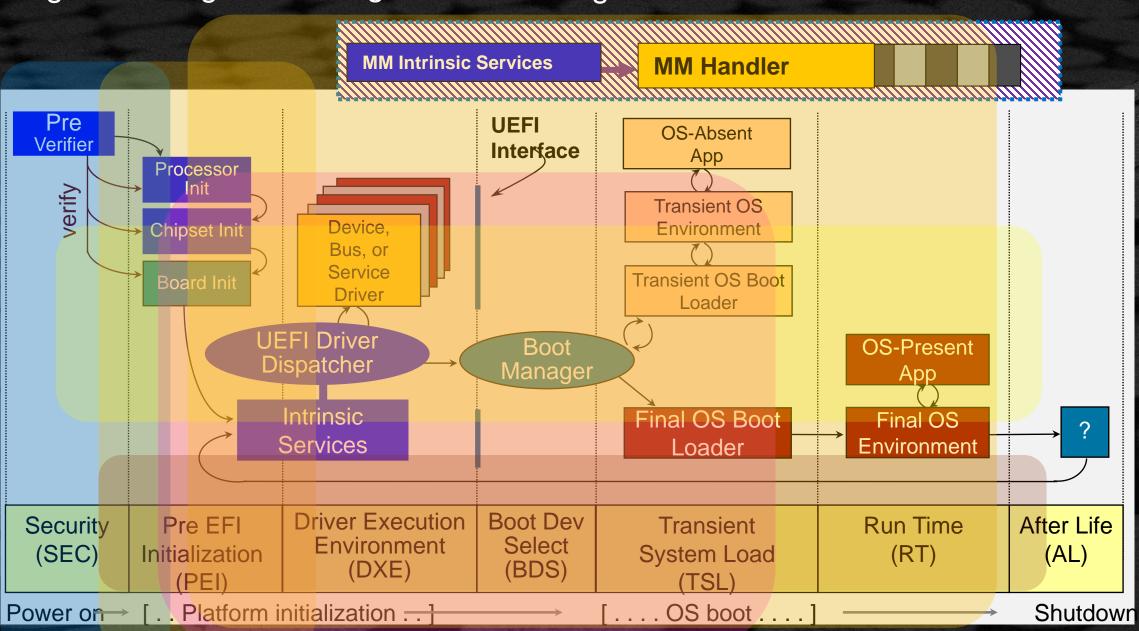

Stage 1 Stage 2 Stage 3 Stage 4

Stage 5

Stage 6

# Minimum Platform + Intel® FSP Boot Flow - Staged Approach

# Minimal Debug

External Debugger Support

**Serial Port** 

Progress and Error reporting

### Memory Functional

Basic HW Initialization

Memory Initialized

# Boot to UEFI Shell

Includes Serial Console I/O

UEFI Shell command line interface

### Stage S OS Boot to

Basic ACPI Table Initialization

SMM support

OS kernel minimal functionality

# Security Enabled

Authenticated Boot

Security Registers Locked

### Advanced Feature Selection

Features Selected Based on System-Specific Usage.

**BIOS Setup** 

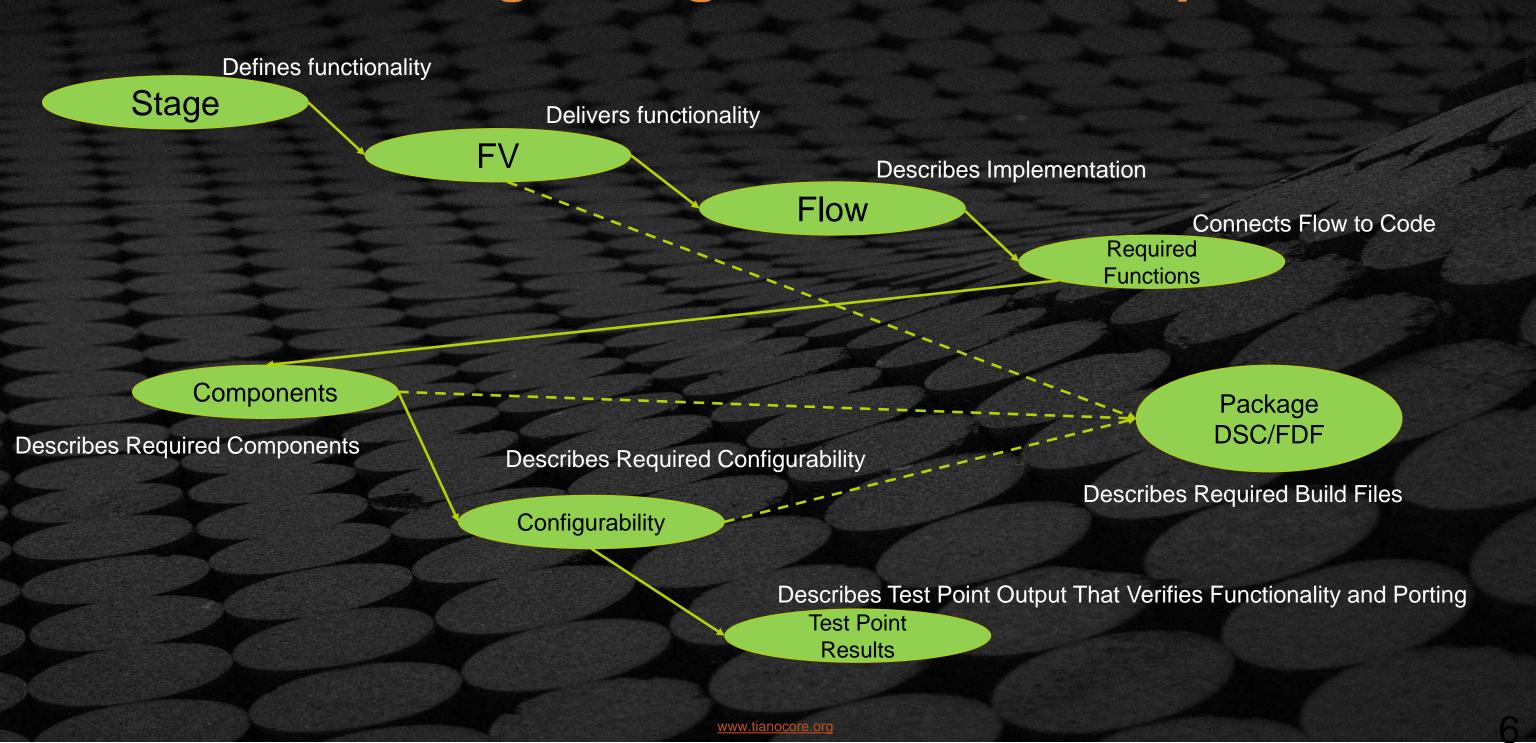

Capsule Update

Minimum Platform

Full Platform

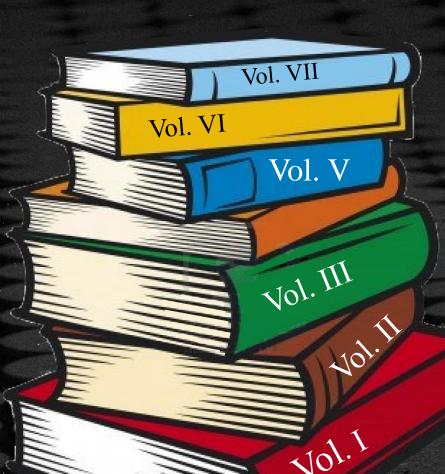

# Stages Organize the MPA Specification

# Staged Approach by Features

- Firmware Volume

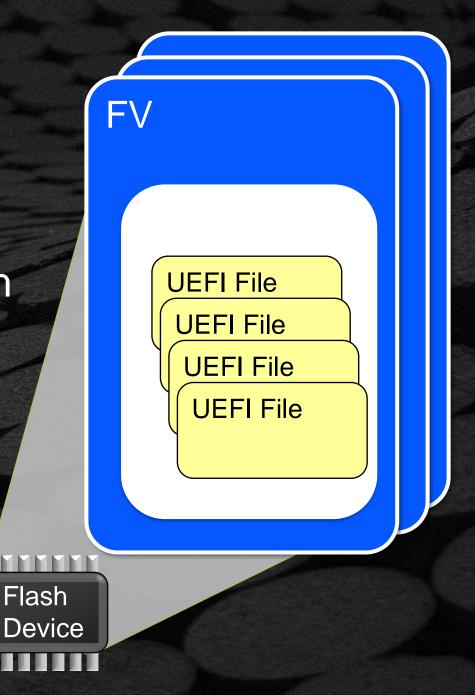

Modules organized by Firmware Volumes according to the different boot stages

# **UEFI Firmware Volumes (FV) - Review**

### Platform Initialization - Firmware Volume

- Basic storage repository for data and code is the Firmware Volume (FV)
- Each FV is organized into a file system, each with attributes
- One or more Firmware File Sections (FFS) files are combined into a FV
- Flash Device may contain one or more FVs.
- FDF file controls the layout → .FD image(s)

PI Spec Vol 3

### Standardize FV By Stages

### Pre-Memory

 FvPreMemory – The PEIM dispatched before the memory initialization. Also included FSP - FV

### Post Memory

 FvPostMemory – The PEIM dispatched after the memory initialization. Also included FSP - FV

### **UEFI** Boot

 FvUefiBoot – The DXE driver supporting UEFI boot, such as boo to UEFI shell.

**OS** Boot

 FvOsBoot – The DXE driver supporting UEFI OS boot, such as UEFI Windows.

Security

 FvSecurity – The security related modules, such as UEFI Secure boot, TPM etc.

Advanced

 FvAdvanced – The advanced feature modules, such as UEFI network, IPMI etc.

RebaseAndPatchFspBinBaseAddress.py

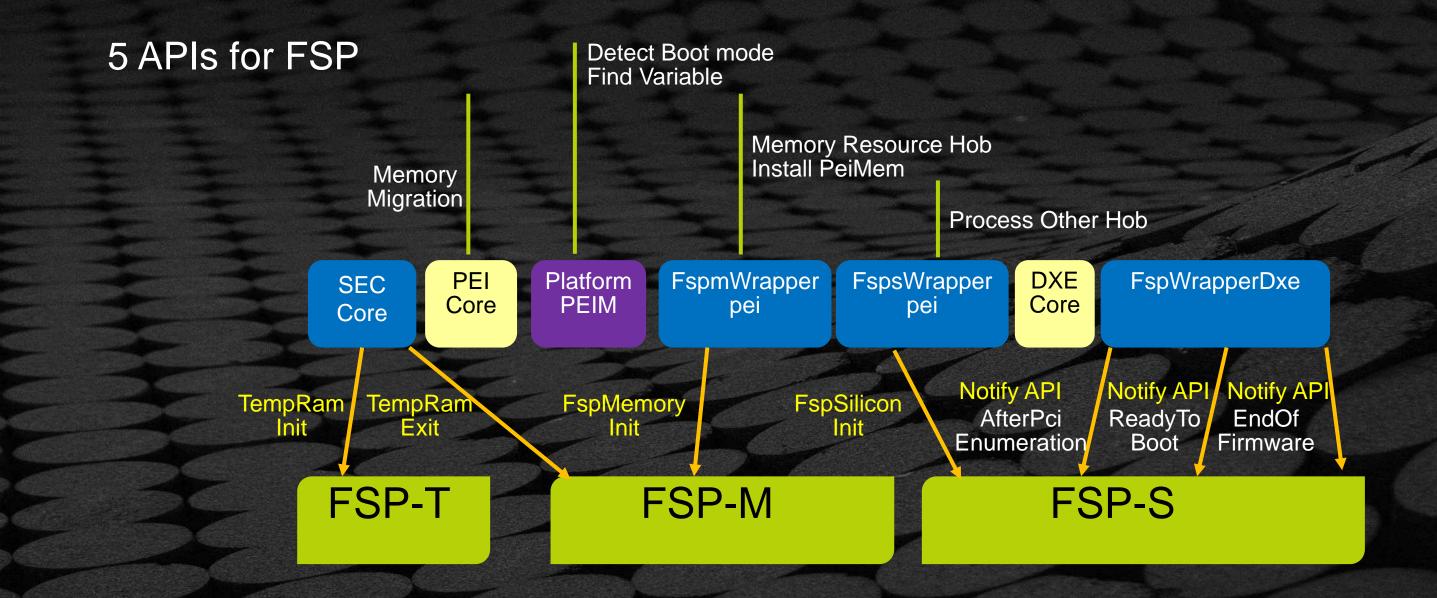

### FSP APIs in FSP Binary

### **Boot Flow with FSP API Mode**

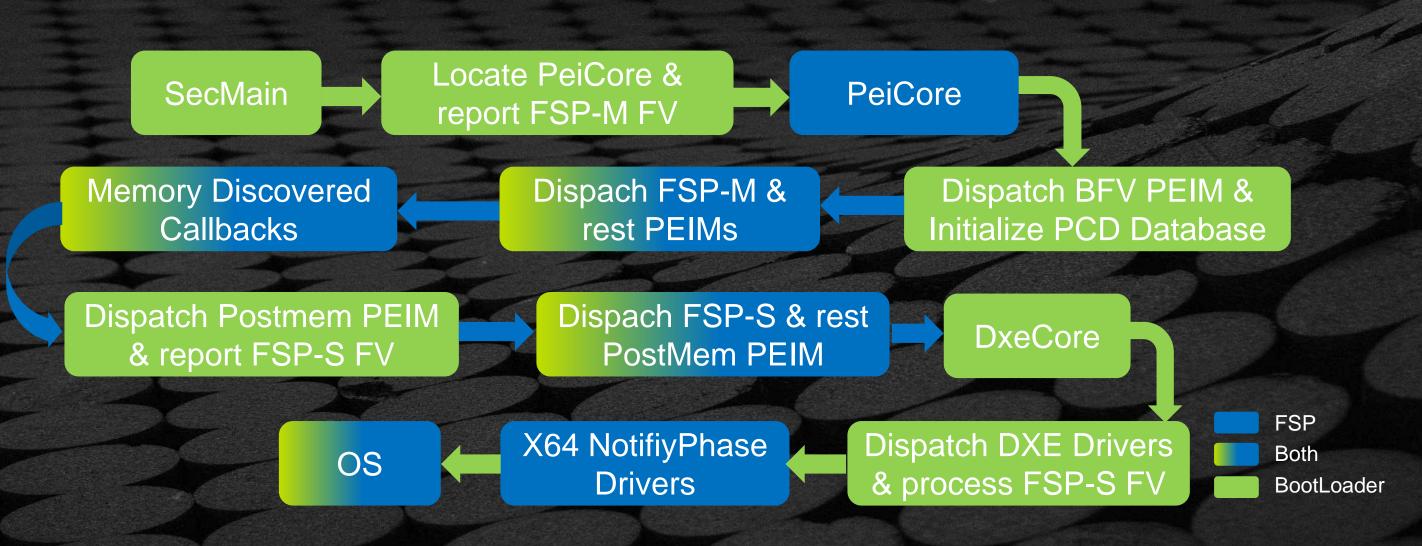

Source: Using the Intel® FSP with EDK II (2.0) Fig 4.

### FSP 2.1 Dispatch Mode Boot Flow

gIntelFsp2WrapperTokenSpaceGuid.PcdFspModeSelection 0 - dispatch, 1 — API

FSP Spec 2.1

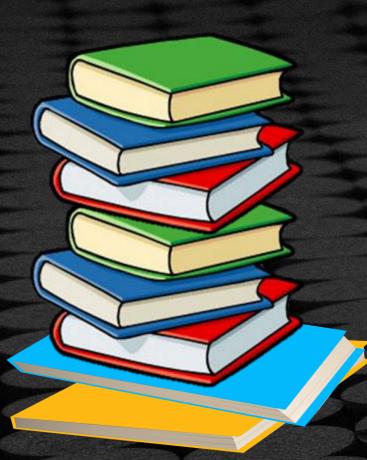

# PLATFORM HOOKS Using EDK II Libraries

# EDK II Libraries w/ Platform Hooks

DSC maps library class to library-instances

Syntax in DSC file

[libraryclasses]

LibraryClassName | Path/To/LibInstanceNameInstance1.inf

Search INF files for string: "LIBRARY\_CLASS ="

### Library Classes Section in DSC

### DebugLib class example

**Library Class Section** 

```
[LibraryClasses]
    DebugLib | MdePkg/Library/BaseDebugLibNull/BaseDebugLibNull.inf
[LibraryClasses.common.DXE CORE]
    DebugLib | IntelFrameworkModulePkg/Library/PeiDxeDebugLibReportStatusCode/
           PeiDxeDebugLibReportStatusCode.inf
[LibraryClasses.common.DXE SMM DRIVER]
    DebugLib | MdePkg/Library/BaseDebugLibNull/BaseDebugLibNull.inf
                                                                       Components Section
[Components]
MyPath/MyModule.inf {
<LibraryClasses>
    DebugLib | MdePkg/Library/BaseDebugLibSerialPort.inf
```

### Platform Initialization Board Hook Modules

```
MinPlatformPkg/
  Include/
     Library/
       BoardnitLib.h
  Library/

   BoardDetect()
   BoardDebugInit()
   BoardBootModeDetect()
   BoardInitBeforeMemoryInit()
. . .
Notify call back
   BoardInitAfterMemoryInit()
```

PlatformInitPostMem/

```
PlatformInitPostMem/
   BoardInitBeforeSiliconInit()
. . .
   BoardInitAfterSiliconInit()
```

# Minimum Platform Architecture Summary

**Feature** 

Tree Structure

Configuration

- Staged
- Defined PCD
- Policy Hob/PPI/Protocol

Staged Minimal Baseline

Feature ON/OFF

- Debug
- I/O Devices
- User Interface

• . . .

**Porting** 

- Staged
- GPIO
- SIO
- ACPI

# LESSON OBJECTIVE

- Introduce Minimum Platform Architecture (MPA)
- Explain the EDK II Open board platforms infrastructure & focus areas
- Describe Intel® FSP with the EDK II open board platforms

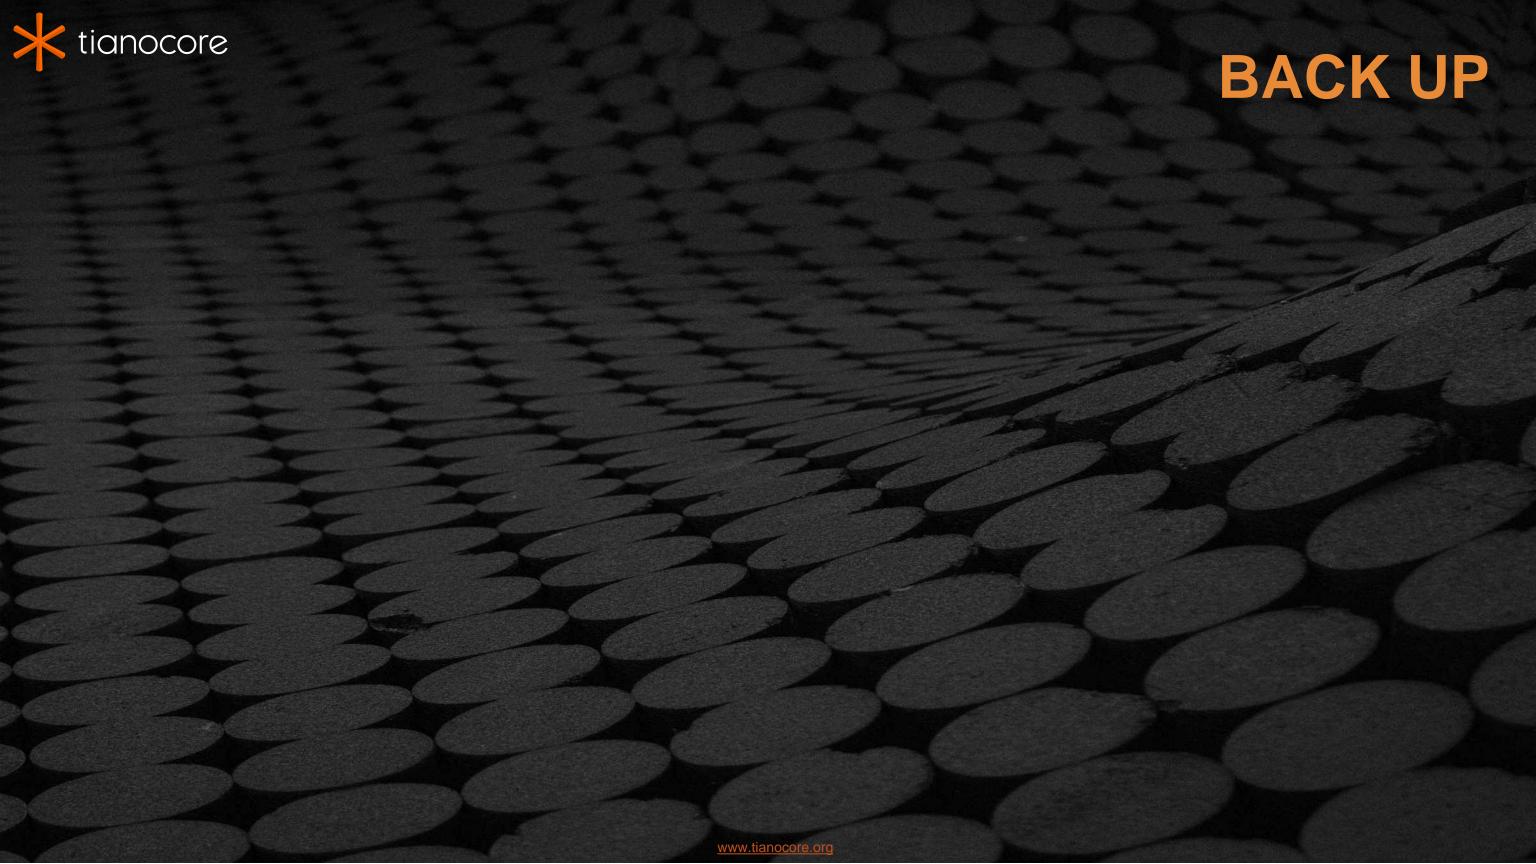

# Return to Main Training Page
